

BENDING SOLUTIONS INC.

Tube Bending & Metal Fabrication

CNC Tube Bending

Large Radius Roll Bending

End Forming

Saw Cutting

High Volume Robotic Welding

CNC Machining

OEM Contract Manufacturing

Tube Bending is What We Do. And we do it well.

Bending a piece of tube may not seem like a big deal to most people, but it is to us. That's because we know if it doesn't fit, your whole assembly can be compromised. If it isn't finished just right, your customer may not take delivery. And if the tolerances haven't been taken into account, well the whole thing may just fall apart.

We understand what keeps you up at night. Not just getting the part fabricated to spec, but getting it delivered precisely when you need it.

Whether your job is big or small, low volume or high, you can be sure we'll meet your needs.

We've Got the Tools

From the latest CNC tools to our materials knowledge and shop management, almost everything we do is about bending tube. We use state of the art CNC tube bending machines to contract manufacture consistent parts. We invest in the latest equipment and

BSI Where the Shortest Distance Between Two Points is a Curve.

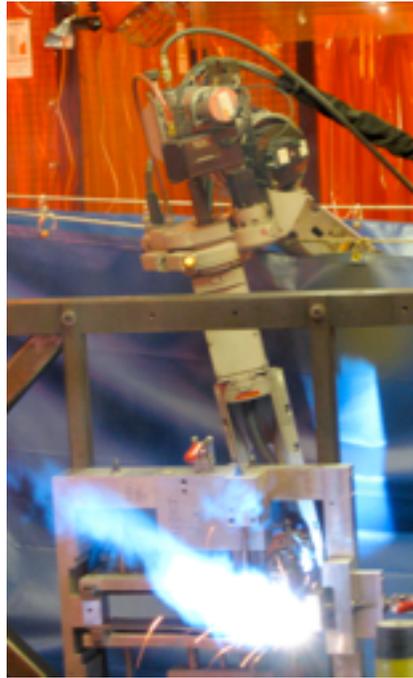

tooling, so you can be assured your parts will meet the tolerances and production volumes you require.

Faster Than a Speeding Bullet

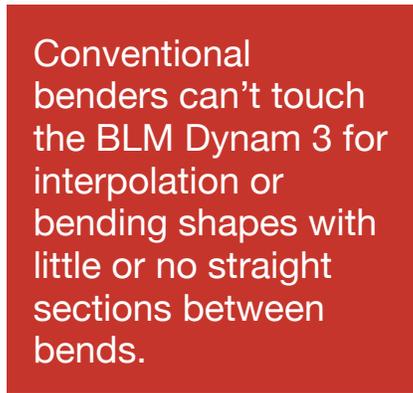

Would you believe a quick turnaround? Whether you need rapid prototyping, reverse engineering or contract manufacturing, we're ready to get started immediately. We work with you to meet your deadlines while ensuring quality tube inspection every step of the way.

Beyond Bending

We also do tube fabrication and welding in-house. These capabilities, combined with our network of preferred vendors, means we can turnkey most jobs so you don't need to second source.

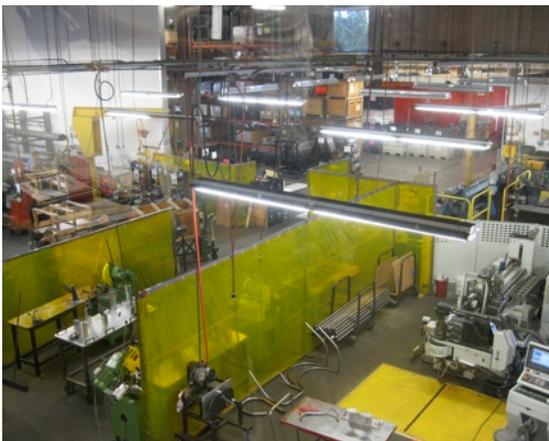

Our Motoman FabWorld II is precision in motion.

Conventional benders can't touch the BLM Dynam 3 for interpolation or bending shapes with little or no straight sections between bends.

We continually invest in our people, equipment and tooling to provide our customers the best products and service in the industry. D. Steve Larson, President
